THE CANADIAN JOURNAL OF CHEMICAL ENGINEERING

JANUARY 2020  VOLUME 98  NUMBER 1

Issue Highlights ................. 3

Special Series: Established Leaders in Chemical Engineering

Established Leaders in Chemical Engineering Series Preface ........ 4
João B. P. Soares

Winery Wastewater Management and Treatment in the Niagara Region of Ontario, Canada: A Review and Analysis of Current Regional Practices and Treatment Performance .......... 5
Melody B. Johnson and Mehrab Mehrvar

Special Series: Experimental Methods in Chemical Engineering

Experimental Methods in Chemical Engineering: Fourier Transform Infrared Spectroscopy—FTIR ....................... 25
M. Olga Guerrero-Pérez and Gregory S. Patience

Experimental Methods in Chemical Engineering: Thermogravimetric Analysis—TGA .................. 34
Nooshin Saadatkahb, Adrián Carillo García, Sarah Ackermann, Philippe Leclerc, Mohammad Latifi, Said Samih, Gregory S. Patience and Jamal Chaouki

Special Series: CFD

Comparison of Finite Volume and Lattice Boltzmann Methods for Multicomponent Flow Simulations ................. 44
Orest Shardt

Articles

Biotechnology, Biochemical and Biomedical Engineering

Production of 2,3-Butanediol from Diverse Saccharides via Fermentation ........................................ 54
David Fernández-Gutiérrez, Marc Veillette, Antonio Avalos Ramírez, Anne Giroir-Fendler, Nathalie Fauchex and Michele Heitz

Graphene Functionalized Decellularized Scaffold Promotes Skin Cell Proliferation ...................... 62

Beta-Carotene Production within Dunaliella Salina Cells Under Salt Stress Condition in an Indoor Hybrid Helical-Tubular Photobioreactor ........................................... 69
Ali Hashemi, Monire Moslemi, Farshid Pajoum Shariati and Hossein Delavari Amrei

Environment, Renewable Resources and Green Processes

Simulation of a Calcium Looping CO₂ Capture Process for Pressurized Fluidized Bed Combustion .................... 75
Benoît Dubois, Robert T. Symonds, Robin Hughes, Pouya Mehrani, Edward J. Anthony and Arturo Macchi

Flax Nanofibrils Production via Supercritical Carbon Dioxide Pre-Treatment and Enzymatic Hydrolysis ........ 84
Hervé Nlando, Khaled Belkacemi, Naima Chorfa, Said Elkoun, Mathieu Robert and Safia Hamoudi

Water Soluble Polymeric Nanofibres for Rapid Flocculation and Enhanced Dewatering of Mature Fine Tailings 96
Christopher Afucan, Ravin Narain and João B. P. Soares

Influence of Lignin Accessibility on Chemical and Biological Decomposition of Lignin/Polyethylene Composite Thermoplastics .................................................. 104
Yong Tang, Zhiben Ye and Michel Jean

Dalia Heggo, Shinichi Ookayama, Teshiho Ohno, Toru Nakai, Yoshihiro Masumoto, Mina Gamal Eldin and Masahiro Oshima

Wendi Guo, Xiaotao Bi, C. Jim Lim and Shahab Shokrangoz

Efficient Manganese Decorated Cobalt Based Catalysts for Hydrogenation of 5-Hydroxymethylfurural (HMF) to 2,5-Dimethylfuran (DMF) Biofuel .................................. 138
Solmaz Akman, Merve Eser, Esra Sezgin and Serkan Naci Koc

Industrial Applications of Chemical Engineering Principles

Experimental Investigation and Modelling of CO₂-Foam Flow in Heavy Oil Systems .................... 147
Jing Zhao and Farshid Torabhi

Modelling Coke Formation in an Industrial Ethane-Cracking Furnace for Ethylene Production ............ 158
Hadiseh Karimi, Bolajie Olayiwola, Hany Farag and Kimberly B. McAuley

The Multi-Stage Vertical Bioreactor in Water Engineering .......................... 172
Manuel Alvarez Cuenca and Maryam Reza

(Continued)
**Interfacial and Electrochemical Phenomena**

Stability of Multiple Emulsions Under Shear Stress ........................ 186
Laura Luhede, Tobias Wollborn and Udo Fritsching

**New Materials, Nanomaterials and Nanotechnology**

A Facile Synthesis of Nontoxic Luminescent Carbon Dots for Detection of Chromium and Iron in Real Water Sample and Bio-Imaging .................................. 194
Rupam Sinha, Anil P. Bidkar, Ravula Rajasekhar, Siddharthita S. Ghosh and Tapas K. Mandal

**Process Control, Systems Engineering and Statistics**

Assessment of Khibiny Alkaline Massif Groundwater Quality Using Statistical Methods and Water Quality Index .............................. 205
Daria Popugaeva, Konstantin Kreyman and Ajay K. Ray

A Methodology for Identifying Phenomenological-Based Models Using a Parameter Hierarchy .................................................. 213
Santiago Lopez-Restrepo, Jose Garcia-Tirado and Hernan Alvarez

Tensor Sequence Component Analysis for Fault Detection in Dynamic Process .................................................. 225
Pengfei Huang, Yang Tao, Bing Song, Hongbo Shi and Shuai Tan

Two-Layer Model Predictive Control for Chemical Process Model with Integrating Controlled Variables ................................. 237
Yuanqing Yang and Baocang Ding

A New Monitoring Method for the Between-Mode Transition of Multimode Processes .................................................. 254
Zhenghe Xu and Jacob Masliyah

**Reaction Engineering, Chemical Kinetics and Catalysis**

Lianfeng Zhang, Carol Moralejo and William A. Anderson

Theoretical Estimation of the Apparent Rate Constants for Ozone Decomposition in Gas and Aqueous Phases Using Ab Initio Calculations .................................................. 274
Mehrehad Parchei Esfahani, Chongyang Wu and Alex De Visscher

Beneficial Effect of Adding γ-AlOOH to the γ-Al2O3 Washcoat of a PdO Catalyst for Methane Oxidation .................................................. 281
Hamad Almohamadi and Kevin J. Smith

Effect of Phase Maldistribution on Performance of Two-Phase Catalytic Monolith Reactor and its Comparison with Trickle Bed Reactor ........................................................................... 294
Shaibal Roy, Premkumar Kamalanathan, Peter Lehner, Thomas Turek and Muthanna Al-Dabhan

The Effects of Modes of Hydrogen Input and Reactor Configuration on Reaction Rate and H2 Efficiency in the Catalytic Hydrogenation of Alkynol to Alkenol .................................................. 308
Francisca Navarro-Fuentes, Mark Keane and Xiong-Wei Ni

A New Approach for Describing and Solving the Reversible Briggs-Haldane Mechanism Using Immobilized Enzyme .............................. 316
Marco Carruzco-Escalante, José Caro-Corales, Rosalina Irribe-Salazar, Erika Rios-Irribe, Yessica Vázquez-López, Roberto Gutiérrez-Dorado and Oscar Hernández-Calderón

**Separation Processes**

Role of Mineral Flotation Technology in Improving Bitumen Extraction from Mined Athabasca Oil Sands—II. Flotation Hydrodynamics of Water-Based Oil Sand Extraction .................................................. 330
Joe Z. Zhou, Haihong Li, Ross S. Chow, Qingxia Liu, Zhenghe Xu and Jacob Masliyah

Removal of Arsenic(III) from Aqueous Solution by Concrete-Based Adsorbents ............................................................................ 353
Mrinmoyee Mondal, Kyriakos Manoli and Ajay K. Ray

Determination of Clay Content in Canadian Oil Sands Using X-Ray Fluorescence Spectroscopy for Diagnosis of Ore Processability ............................................................................ 360
An Li and Zhenghe Xu

Removal of Aluminum from Alkaline Aqueous Solution by Adsorption on Degussa P25 TiO2 and Vermiculite Concrete-Supported Ferric Oxyhydroxide .................................................. 373
Daria Popugaeva, Konstantin Kreyman and Ajay K. Ray

Investigation and Development of Gravity Separators with a Standardized Experimental Setup ............................................................................ 384
Jan Steinhoff, Evgenia Charlafti, Laura Reinzeke, Matthias Kraume and Hans-Jorg Bart

Adsorption for Perfluorooctanoic Acid with Graphitic-Phase Carbon Nitride and its HPLC Fluorescence Determination .................................................. 394
Xiao Hu, Yan Liu, Rongguang Yang, Yinhuai Jiang, Minjia Meng, Zhanchao Liu, Liang Ni, Weifu Wu and Hongwei Liu

**Transport Phenomena, Fluid Dynamics and Thermodynamics**

Phase Behaviour Modelling of Athabasca Bitumen for In Situ Combustion Applications .................................................. 404
Ahmad Alizadeh, Robert Gordon Moore, Raj Mehta and Hossein Nourozieh

CFD Simulation of Mixing and Segregation of Binary Solid Mixtures in a Dense Fluidized Bed .................................................. 412
Bozidar Anicic, Bona Lu, Weiqang Lin, Hao Wu, Kim Dam-Johansen and Wei Wang
