

THE CANADIAN JOURNAL OF CHEMICAL ENGINEERING

DECEMBER 2022

VOLUME 100 NUMBER 12

Issue Highlights 3439

CJCE Perspective Article Special Series

Is it time to change how we write scientific articles? 3440
João B. P. Soares

Established Leaders Special Series

Oxygen scavenging systems for food packaging applications:
A review 3444
Zahra Kordjazi and Abdellah Aji

Experimental Methods in Chemical Engineering

Experimental methods in chemical engineering: Hazard and operability
analysis—HAZOP. 3450
*Paolo Mocellin, Jacopo De Tommaso, Chiara Vianello,
Giuseppe Maschio, Thomas Saulnier-Bellemare, Luis D. Virla and
Gregory S. Patience*

Computational Fluid Dynamics for Chemical and Process Engineering Special Section

Preface to the computational fluid dynamics for chemical and process
engineering special issue section 3470
Holger Marschall

Editor's Choice

Validation of a procedure for the numerical simulations of gas–liquid
stirred tanks by means of a computational fluid dynamics
approach. 3472
*Francesco Maluta, Federico Alberini, Giuseppina Montante and
Alessandro Paglianti*

Shape optimization of pipeline components 3486
*Jessica Guarato de Freitas Santos, Francisco José de Souza and
Bruno Silva de Lima*

Computational analysis of flow conditions in hydrodynamic cavitation
generator for water treatment processes 3502
Jurij Gostiša, Primož Drešar, Marko Hočevar and Matevž Dular

Coalescence-induced jumping of microdroplets on superhydrophobic
surfaces—A numerical study 3517
*Konstantinos Konstantinidis, Johan Göhl, Andreas Mark and
Srdjan Sasic*

Computing hydrodynamic eigenmodes of channel flow with slip—
A highly accurate algorithm 3531
*Suraj Raju, Dirk Grönding, Tomislav Marić, Dieter Bothe and
Mathis Fricke*

Effect of turbulence intensity and surface tension on the emulsification
process and its stationary state—A numerical study 3548
*Alexander Begemann, Theresa Trumler, Elias Trautner,
Josef Hasslberger and Markus Klein*

Response of shear-activated nanotherapeutic particles in a
clot-obstructed blood vessel by CFD-DEM simulations 3562
*Lorenzo Vasquez Giuliano, Antonio Buffo, Marco Vanni,
Alessandra Sabina Lanotte, Valentina Arima, Monica Bianco,
Francesca Baldassarre and Graziano Frungieri*

Articles

Biotechnology, Biochemical and Biomedical Engineering

Thermo-responsive macroporous p(NIPAM) cryogel affords enhanced
thermal stability and activity for α -glucosidase enzyme by entrapping
in situ 3575
Sahin Demirci and Nurettin Sahiner

Industrial Applications of Chemical Engineering Principles

Bubble dynamics in 2-D gas–solid fluidized bed with Geldart A
or Geldart B particles by image processing method 3588
*Bowen Han, Zeneng Sun, Jesse Zhu, Zhijie Fu, Xiangwei Kong and
Shahzad Barghi*

Characterization of blast furnace slag particles generated by nitrogen
jet granulation 3600
*Xiaoxiao Yang, Hui Zhou, Qinghai Li, Zhongchao Tan and
Yanguo Zhang*

Fault clustering by small-entropy nonnegative matrix
factorizations 3608
Qilong Jia

Process Control, Systems Engineering and Statistics

A hybrid machine learning approach integrating recurrent neural
networks with subspace identification for modelling
HVAC systems 3620
Hesam Hassanpour, Prashant Mhaskar and Michael J. Risbeck

Analysis of commonly used scheduling models for multistage
biopharmaceutical processes 3635
Vaibhav Kumar, Munawar A. Shaik and Arpit Jain

Modelling and optimization of the ferrous to ferric sulphate
conversion with hydrogen peroxide using polynomial-PSO
and PSO-ANNs models 3653
*Verônica Barbosa Mazza, Rodrigo Bustamante,
Ana Rosa Fonseca de Aguiar Martins, Luiz Alberto Cesar Teixeira
and Bruno Ferreira dos Santos*

Temperature and water activity control in a lipase catalyzed esterification process using nonlinear model predictive control . . . 3669
Siti Asyura Zulkeflee, Fakhrony Sholahudin Rohman, Suhairi Abdul Sata and Norashid Aziz

Decoupled double-loop FOIMC-PD control architecture for double integral with dead time processes 3691
Deepak Kumar, Pulakraj Aryan and G. Lloyds Raja

Offline identification and output prediction for a class of SISO Wiener process 3704
Zhu Wang, Haichao Chen, Likai Zhao and Xionglin Luo

Reaction Engineering, Chemical Kinetics, and Catalysis

Brønsted acidic ionic liquid-catalyzed and ultrasound-promoted transesterification of fish oil with ethanol 3717
Piao Cao, Lin Zheng, Weizhen Sun and Ling Zhao

Separation Processes

Investigation of the drying kinetics of brewer's spent grain (BSG) using artificial neural networks and traditional empirical models. . . 3727
Fabio Henrique Bastiani, Bruno Telli Ceccato and Douglas Junior Nicolin

Valorization of soybean oil residue through advanced technology of graphene oxide modified membranes for tocopherol recovery 3736
Nicole Novelli do Nascimento, Ana Carolina Vieira, Paulo Waldir Tardioli, Rosângela Bergamasco and Angélica Marquetotti Salcedo Vieira

Comparison of three methods for the sequential extraction of lignite pretreated by ionic liquid 3750
Ning Ding, Mei Li, Jinsong Yue, Sidan Cheng and Caiyun Gao

Precipitation of lithium phosphate from lithium solution by using sodium phosphate 3760
Dong Ju Shin, Sung-Ho Joo, Dongseok Lee and Shun Myung Shin

Transport Phenomena, Fluid Dynamics and Thermodynamics

A generalized linear secant bulk modulus based correlation for the prediction of compressed liquid density 3768
Francisco Ramos-Pallares

Numerical investigation of flow, heat transfer, and kinetic reaction in a large-difference bidisperse, circulating fluidized-bed reactor 3777
Chen Song, Juan Xiao, Weixiang Lin, Simin Wang, Jiyuan Tu and Jian Wen
