

THE CANADIAN JOURNAL OF CHEMICAL ENGINEERING

MARCH 2026

VOLUME 104 NUMBER 3

Issue Highlights 1099

Article

Environment, Renewable Resources, Green Processes

Enhancing energy recovery from waste through torrefaction: A study on municipal solid waste (MSW) fractions under N₂ and CO₂ atmospheres 1100
Fatemeh Salami and Naomi B. Klinghoffer

Geopolymeric membranes: A comprehensive review of emerging wastewater treatment solutions 1121
Amani Boushila, Samir Ismaili, Adel Zrelli, Souad Najar, Qusay Alsathy, M. Olga Guerrero-Pérez, Enrique Rodríguez-Castellón, Daniela Gier DellaRocca, Mariana Schneider and Regina F. Peralta Muniz Moreira

Application of machine learning in modelling gas dispersion coefficients for hydrogen storage in porous media 1137
Ali Akbari

Pore structure of ethyl cellulose (EC)/graphene oxide (GO) composite film investigated by electrochemical impedance spectroscopy 1153
Hejie Shen, Xiaomin Dian, Zisheng Feng, Zhe Chen, Geming Wang, Ping Fu, Zhidong Lin, Lei Yao and Hamdy F. M. Mohamed

Application of ‘treating the waste with waste’: Fabrication of hierarchically hollow structures of AlOOH/Al₂O₃ as adsorbents for the high efficiency removal of methyl blue 1162
Hongmei Shao, Yong Cui, Wendi Xu, Wei Zhang, Xuettian Li, Zhongcai Shao and Xiaoyi Shen

Industrial Applications of Chemical Engineering Principles

Modelling and simulation of hydrogen production via natural gas plasma pyrolysis 1174
Muhammad Badrul Islam Chowdhury, Anton Alvarez-Majmutor and Jinwen Chen

A review using data-driven approach in quantitative assessment of Fischer–Tropsch synthesis 1190
Yixiao Wang, Jing Hu, Ning Wang, Junbo Tong, Laure Braconnier and Yong Sun

Modelling and simulation of the sugarcane delignification process by alkaline pretreatment using H₂O₂ 1211
Luis Antonio Velázquez Herrera, José Ángel Cobos Murcia and Leticia López Zamora

Optimizing drilling fluid rheology: The role of particle size distribution and advanced rheological modelling 1223
Jaber Al Jaber and Badr Bageri

Interfacial and Electrochemical Phenomena

Part III: NiMoO₄ nanostructures synthesized by the solution combustion method: The influence of material synthesis parameters on the electrocatalytic activity toward the oxygen evolution reaction in an alkaline medium 1238
Mahmoud B. Rammal, Aqeel Alrebh, Yassin Vancolen and Sasha Omanovic

A comparative study on corrosion resistance of 316 L stainless-steel welds in nutrient fertilizer solutions such as Ca(NO₃)₂, KNO₃, KH₂PO₄ 1251
Il-Jin Pang, Gwang-Hyok Jo, Won-Chol Son, Yong-Gwang Jong and Un-Chol Han

New Materials, Nanomaterials, and Nanotechnology Engineering

Synthesis of shape-controlled silica nanoparticles via dual soft templates: A comparative study between aqueous and microemulsion synthesis for the impregnation of procaine anaesthesia drug 1262
Zine eddine Daikh, Edrees Abu Zeitoun, Teffaha Fergoug, Youcef Bouhadda, Khaled Derkaoui, Khaled Bekki, Aicha Kadiri, Yassine Chaker, Mustapha El Hariri El Nokab, Cameron S. Vojvodin, Tuo Wang, Paul H. M. Van Steenberge and Khaled O. Sebakhly

Process Control, Systems Engineering, and Statistics

Adsorption of 5G blue reactive dye using passion fruit pomace: Kinetics, ANN modelling, and process optimization 1283
Maraísa Lopes de Menezes, Gracielle Johann and Nehemias Curvelo Pereira

Dynamic NO_x emission prediction in coal-fired power plants based on joint multi-head attention CNN-GRU hybrid model 1298
Jianghong Chen, Zhimin Lu, Zhenghui Li, Wenjing Li, Anli Zhou, Wenbo Pi, Youxing Wei and Shunchun Yao

Optimal control of carbon capture system in coal-fired power plant based on fusion of CNN-LSTM and EMPC for MOGWO optimization 1314
Chuntao Rao, Minan Tang, Kaiyue Zhang, Zhongcheng Bai, Yude Jiang, Hanting Li, Tong Yang, Zhanglong Tao, Shusheng Xu and Changyou Wang

Fault diagnosis of industrial processes using dynamic global–local preserving projection and genetic algorithm-based feature selection 1334
Chonggao Hu, Jianjun Bai and Hongbo Zou

Complex multi-stage process fault detection based on t-SNE-BPNN combined with spatiotemporal neighbour center distance 1352
Liwei Feng, Chenhao Zhao, Bin Tian, Zhenhao Cui and Yuan Li

Reaction Engineering, Chemical Kinetics, and Catalysis Editor's Choice

Learning hydrocracking reaction dynamics via neural ODEs: A data-driven, gradient-interpretable lumped modelling framework 1372
Souvik Ta, Lakshminarayanan Samavedham and Ajay K. Ray

Pyrolysis of high ash gasifiable waste materials—Evaluation of kinetic parameters using thermogravimetric analysis for energy extraction 1387
Aliyarukunju Fazil, Sandeep Kumar and Sanjay M. Mahajani

Microkinetic modelling-driven insights into water–gas shift catalysis—Towards unravelling active transition metal-based bimetallic alloys. 1403
Mohammad Zakariya Farooqi and Fatima Jalid

Preparation of industrial ammonium metatungstate (AMT) from sulphuric-cum-phosphoric acid leaching by solvent extraction with aliquat-336. 1420
Alafara A. Baba, Sadsu Girigisu and Abdullah S. Ibrahim

Alkaline–acid modification of HZSM-5 zeolites: Catalytic conversion of methanol in synergy with raffinate oil to light olefins 1430
Wang Fenglan, Xu Yarong and Wei Shumei

Separation Processes

Application of a Zn-air battery in water desalination 1441
Saba Khodadousti and Georgios Kolliopoulos

Incorporating ethylene glycol into hydrophilic poly(ether-b-amide) membranes for enhanced gas dehumidification performance 1449
Iris Samputu and Xianshe Feng

Comparison between the performances of PmPD-PVA membrane synthesized by ammonium persulphate with ferric chloride oxidants used for Congo red dye removal 1463
Dounia Beqqour, Doha El Machtani Idrissi, Sanaa Adlane, Manal Idgharnane, Jamilya Naim, Mounir Belbahloul, Hayat Loukili, Mohamed Ouammou, Jamal Bennazha, Abdellah Aaddane, Soad Youssefi and Saad Alami Younsi

Investigating the effect of operational and geometric parameters on the performance of an axial spiral series mixer in the solvent extraction process 1475
Elham Sadat Ahmadi Moosavi, Fereshteh Bakhtiari, Alexander Mirzamoghadam, Esmaeel Darezereshki, Ataallah Soltani Goharrizi and Hamideh Barfeii

Transport Phenomena, Fluid Dynamics, and Thermodynamics

Research on heat transfer characteristics of supercritical hydrogen in rough U-shaped channels 1509
Yue Gao, Wenquan Jiang, Xiao Hai, Fan Yang, Lijuan Wang, Pengfei Li, Fei Wang and Xuyang Chen

Selection of deep eutectic solvents for CO₂ separation processes by thermodynamic analysis 1526
Yingying Zhang, Daming Wu, Fuyi Li, Runyi Liu, Longhuan Wu, Ying Li, Ruixue Zhang, Yakun Li, Dan Ping and Xuzhao Yang

Numerical simulation of airflow within a duct with sickle-shaped barriers in tube heat exchangers 1540
Mouad Benaicha, Youssef Es-Sabry, Elmiloud Chaabelasri and Abdellatif M. Sadeq

Effect of high liquid viscosity on intermittent/annular flow pattern transition in two-phase upward vertical flow 1558
Eissa Al-Safran and Mohammad Ghasemi

Numerical simulation for influence of rear wear ring and balance hole on performance of the canned motor pump 1578
Sheng Han, Yongqiang Duan, Yang Wan, Jingxu Ge and Guojun Li

A phenomenological study of bubbles from the venturi pipe microbubble generator without and with guitar string insertion . . . 1599
Anugerah Erlaut, Soen Steven, Pandit Hernowo, Ibnu Maulana Hidayatullah, Neng Tresna Umi Culsum, Intan Clarissa Sophiana, Tulus Sukreni and Mubiar Purwasasmita

Effects of superhydrophobicity and Lorentz force on MWCNT-AL₂O₃-CuO/(10:90)EG.W flow in a microtube with viscous dissipation. 1613
Nizar Loussif

Physical simulation of pore filling pressure gradient at different scales in shale oil reservoirs 1630
Ying Zhao, Jianguang Wei, Jinyou Zhang, Zhaojie Song, Chenggang Xian and Ying Yang
