

THE CANADIAN JOURNAL OF CHEMICAL ENGINEERING

NOVEMBER 2026

VOLUME 104 NUMBER 11

Issue Highlights 5775

Experimental Methods in Chemical Engineering Special Series

Experimental methods in chemical engineering:
Cyclic voltammetry—CV 5776
*Yasser Matos-Peralta, Christopher Panaritis, JoElen Hagler,
Clara Santato and Gregory S. Patience*

Perspectives in Chemical Engineering Special Series

What makes a good review? A fictional case study 5828
João B. P. Soares and Thomas A. Adams II

Editorial

Chemical engineering across borders: Amplifying global research . . . 5847
João B. P. Soares

Celebration of the 75th CSChE Special Issue Section

Special edition of the 75th Canadian Chemical Engineering
Conference 5852
Nicolas Abatzoglou

A perspective on parsimonious hybrid models for online use:
Augmenting fundamental models with ARIMA disturbances 5854
Mouna Y. Harb and Kimberley B. McAuley

Random forest regression for catalyst performance prediction
and validation of tri-reforming of methane (TRM) 5875
*Paulo A. L. de Souza, Raja Muhammad Afzal,
Felipe Gomes Camacho and Nader Mahinpey*

Comparative assessment of volume-of-fluid (VOF) multiphase
solvers for viscoplastic flow over grooved patterned surfaces . . . 5892
Amir Joulaei, Alice Villette and Seyed Mohammad Taghavi

A novel bubbling fluid bed reactor for the autothermal pyrolysis
of waste plastics 5910
*Khadija Olivia Ogoula Igouwe, Tchini Séverin Tanoh,
Jasmin Blanchard, Inès Esma Achouri and Nicolas Abatzoglou*

Editor's Choice

A study of Ni-Co/CeO₂ catalyst derived from metal–organic
framework for dry reforming of methane 5921
Ruth D. Alli and Nader Mahinpey

Clathrate hydrate crystallization 5931
Peter Englezos

Revisiting the synthesis of dimethyl carbonate from methanol
and carbon dioxide 5954
*Diego Alexander Santos Araque, Niloofar Mozaffari,
Louis Fradette and Serge Kaliaguine*

Article

Biotechnology, Biochemical, and Biomedical Engineering

Comparative evaluation of traditional and modern extraction
methods for *Alpinia officinarum*: Antimicrobial efficacy,
extraction efficiency, and sustainability 5979
*Hamidreza Ramooz, Mohammad Hassan Shahriari,
Hossein Salmani, Parisa Khadiv-parsi, Zeinab Salehi,
Reza Zarghami and Mousa Mohammadpourfard*

Environment, Renewable Resources, Green Processes

Box–Behnken optimization and ANN-ANFIS integrated modelling
for transesterification using thermally activated basic oxygen
furnace slag catalyst 5991
Johra S. Ali and Hillary L. Rutto

Surface structure change and sulphur transformation of coal char
under oxygen-steam atmosphere at high temperature 6007
*Min Wang, Qian Du, Lei Zhang, Jianmin Gao, Yupeng Li and
Xiaotao Bi*

Study on the degradation of xylose residue in hydrothermal
treatment process 6022
*Shuaifei Zhang, Jiansheng Lv, Xuanke Xie, Junying Chen,
Huixing Li, Hongsheng Chen, Xiaoling Zhao and Xiaoyang Zheng*

Hydrodynamic cavitation for efficient removal of ammoniacal
nitrogen: Optimization of process parameters and geometric
configurations 6037
Neha Thakare and Bharat A. Bhanvase

Study on Ce modified 8Fe6Cr/AC catalyst low-temperature SCR
performance on alkali metal poisoning 6050
*Jun Liu, Shuangyan Wu, Tingting Ge, Yunlan Sun and
Baosheng Zhu*

Industrial Applications of Chemical Engineering Principles

CFD simulation of an industrial autothermal reformer:
Troubleshooting 6062
Azadeh Mirvakili, Parnian Ghanbarizadeh and Zahra Eksiri

Process Control, Systems Engineering, and Statistics

Advanced temperature control of a continuous ethanol
fermentation bioreactor using deep reinforcement learning 6083
Sanoj Kuttikothiya Parambil and Dhanya Ram Vasantha

Dynamic modelling of arsenic removal process in copper
electrolyte purification based on electrodeposition
decontamination technology 6103
Yixiao Ding, Aimin An and Yuwei Qin

Deep learning in chemical engineering: Strengths, weaknesses, opportunities, and threats 6130
Konatala Satya Nooka Venkata Prasad, Bijoy Kumar Purohit, Bhaskar Bethi, Vijaya Kumar Talari and Achavelli Venkata Raghavendra Rao

Latent temporal feature dual-head coordination network for industrial process soft sensing 6154
Xiaoping Guo, Chaochun Guo and Yuan Li

Melt flow index prediction for batch polypropylene based on temporal feature matching. 6177
Zhu Wang and Jinmiao Wang

Reaction Engineering, Chemical Kinetics, and Catalysis

Performance enhancement by reducing water in Prussian blue cathode for sodium ion batteries 6193
Meijia Song, Zhongfa Cheng, Ya Yao and Yanfei Hua

The influence of inorganic components in the Shengli lignite on the bond breaking and functional group evolution patterns during pyrolysis. 6199
Boyang Bai, Ming Sun, Luyao Qiang and Xiaoxun Ma

Separation Processes

Performance evaluation of crossflow, pilot-scale GUNT-CE530 reverse osmosis desalination system 6214
Olalere Olusegun Abayomi, Peter Bernasko, Jacob Gristock, Mohammad Al-Rashed, Rodzers Zalitis, Kesia Bossy, Jaspreet Singh, Samuel Akintunde, Hamed Williams and Lan Selmani

Chemisorption of Sm(III) on a trisphosphorylated Schiff-base adsorbent: Statistically verified kinetic, isotherm, and thermodynamic route to closed-loop Sm_2O_3 recovery from magnet leachates 6223
Ahmed R. A. Weshahy, Ayman A. Gouda, Bahig M. Atia, Ragaa Elsheikh Shohaib and Mohamed A. Gado

Transport Phenomena, Fluid Dynamics, and Thermodynamics

A state-of-the-art review on solid–liquid suspension in stirred reactors throughout the 21st century 6258
Le Kong, Fengling Yang and Zhipu Huo

Kinetics, thermodynamics, and diffusion-controlled mass transfer in the extraction of phenolics from *Laurus nobilis* leaves with screening and multi-response optimization. 6286
Okan Tunç, Ebru Kurtulbaş, İrem Toprakçı and Selin Şahin

Thermal radiation and MHD effects on thermosolutal convection of Casson fluid in a quadrant domain 6299
Gattu Venkata Ramudu, Gandrakota Kathayani, Kupala Raja Sekhar and Kothuru Venkatadri

Optimization of sludge granulation parameters and dehumidification efficiency research based on orthogonal experiment 6320
Qingshan Liu, Lulu Hu and Longjian Li

Coupled effects of magnetic field orientation and flexible fins on nanofluid forced convection heat transfer in a rectangular channel 6332
Said Azzi, Belkacem Belkacem, Mohamed Bouzit, Mohammed Bouhafs and Imadeddine Dehimi

Solute transport analysis in finite soil columns: A fractional-order Burgers–Huxley model approach with spectral collocation method. 6347
Anup Singh, Bijal Yeolekar and Dhiren Pandit

Thermal irreversibility in TiO_2 –Cu hybrid nanofluid magnetoconvection with dual heating modes (cross- and star-shaped), radiation, heat generation, and PIP-FVM in a porous domain 6359
Sameh E. Ahmed, Mohammed. A. Mansour, Mohammed. A. Y. Bakier, Eman F. Mohamed and Zahra Hafed
